

Micro SD Card PCB Extender

PRODUCT ID: 4395

Stop fiddling with micro SD card sockets in the back of your latest gadget during development, and give yourself a little more elbow room with this Small Micro SD Card Extender. This is a great hack for length constraints with 3D printers, single-board computers, data-logging kits and more. Get to your micro SD card in and out *without* using your fingernails!

Insert the micro SD card in the little tray, and gently press the other end to your Raspberry Pi or other device's micro SD card port. We used this with various Feathers, and also a Raspberry Pi Linux computer. It was speedy and error-free, but it *is* a hack, so be aware that high-speed and high-noise environments may end up not working.

Note: Micro SD Card not included.

TECHNICAL DETAILS

Dimensions: 38mm x 12.6mm x 2.8mm
