Shrouded Servo to Premium Male Jumper Wires Cable - 17cm long

Product ID: 5515

Description

Stretch out your servo connections with this flexible servo to premium male header jumper cable. It has a 3-pin shrouded "male" connector to plug the servo into and then, 17cm later, three separated jumper wire ends that plug into a breadboard or some header.

It's excellent for when you want to quickly and easily connect a servo to an existing dev board with sockets, or a breadboard, without having to fish out 3 separate wires of the right color.

A great add-on to all the servos we carry.

Technical Details

- Cable Dimensions: 17cm / ~6.7"
- 26AWG wires
