

Stacking Header Set for Beagle Bone Capes (2x23)

Product ID: 706

Description

Stack to the max with our Beagle Bone Proto Cape using these ingenious stacking headers. They're just like 2x23 0.1" spaced female headers but with a twist! The 'legs' are extra-long so you can solder it -through- a PCB and plug it into the Bone. You can stack as many as you'd like, for modular design. Neat, right?

Each package comes with two pieces of 2x23 header so you only need one per Proto Cape kit. The Proto Cape is not included, so pick one of those up in the shop. Because of the huge number of connections, it's easy to plug in but more difficult to pull out. When removing a stacked cape, be very slow and carefully pry each side up just a little bit to avoid bending the pins as they exit.
