## Overview

The 'C1' module is an extremely small and rugged CAN Bus add-on interface. This standard sized Mini PCIe module provides a simple way to add dual isolated CAN Bus interfaces to most embedded computer systems.

The C1 features operation over the full industrial temperature range (-40° to +85°C) and is shock and vibration tested for worry-free use in industrial and military applications. It uses a latching I/O connector for higher reliability in the field and it provides 2.5 kV of signal isolation to protect the host computer.

The C1 module supports the CAN-FD protocol and a wide range of signaling speeds. CAN-FD is fully compatible with CAN 2.0 A and CAN 2.0 B. It supports numerous CAN functions including message acceptance filter and listen-only mode.

In addition, the module supports the high level CANopen protocol and is compatible with popular operating systems including Windows and Linux.

Like other VersaLogic products, the C1 is designed and validated for operation in unforgiving environments, and for long term availability (10+ year lifecycle).
