

Series 22

Proven. Durable and powerful.

<https://eao.com/>

22 Information about the Series

Key advantages

- Reliable switching of high loads
- Compact construction
- Long travel tactile action

Typical application areas

- Building services and automation
- Control cabinets
- Rail, electrical and waterbound vehicles

Functions

- Illuminated pushbutton
- Mushroom-head pushbutton
- Selector switch
- Indicator

Design

- Flush

IP front protection

- IP65

Raitings

- 400 VAC (10 A)

Mounting cut-outs

- 22 mm x 30 mm

Terminal

- Plug-in terminal
- Screw terminal

Lens Material

- Plastic

Markings

- Engraving
- Hot stamping
- Film insert/markings plate

Approvals

- CB (IEC 61058)
- CSA
- ENEC (EN 61058)
- UL

Conformities

- CE
- 2014/35/EU (LVD)
- 2011/65/EU (RoHS)

Additional information

- Due to high surface temperatures, the series resistor must not be soldered directly to the terminals of the equipment (use a terminal plate)
- When using AC/DC types with AC operation, slight flickering can occur
- The luminous intensity stated is for when used with DC
- Electrical and optical data are measured at 25 °C
- The specified versions are built with a protection diode (half wave rectifier) in series and the LED
- Luminosity and wave length variations caused by LED manufacturing processes may cause slight differences regarding the illumination. The customer has to decide what resistor shall be used to the LED
- Where supply voltages are over 48 V, a voltage-reduction element (external protective series resistor) must be used.

22 Technical data

Actuator with snap-action switching element

Switching system

Self-cleaning, double-break, snap-action switching system (with contact gap 2 x 1.5 mm).
Max. 2 normally closed or 2 normally open contacts, or one of each.

Material

Lens
Plastic, as per UL 94 HB

Front bezel
Plastic

Material of contact
Hard silver

Actuator housing
Plastic

Mechanical characteristics

Terminals
Screw terminal (with self-lifting clip):
Max. wire cross-section 2 x 2.5 mm²
Max. wire cross-section of stranded cable 2 x 1.5 mm²

Plug-in terminal 6.3 mm x 0.8 mm

Actuating force
With 1 switching element 3.6 N ± 0.3 N
With 2 switching elements 6.8 N ± 0.3 N

Actuating travel
5.5 mm ± 0.2 mm

Travel
3 mm

Mechanical lifetime
Illuminated pushbutton 1 million operations
Keylock switch 40 000 operations

Electrical characteristics

Switching voltage and switching current
400 VAC, 10 A (ohmisch)
400 VAC, 4 A (induktiv, cos(phi) = 0,7)
250 VAC, 5 A (induktiv, cos(phi) = 0,7)
250 VAC, 2 A (induktiv, cos(phi) = 0,7)
125 VAC, 8 A (induktiv, cos(phi) = 0,7)
110 VDC, 0,4 A (induktiv, L:R = 30 ms)
60 VDC, 1,5 A (induktiv, L:R = 30 ms)
24 VDC, 6 A (induktiv, L:R = 30 ms)

Electric strength
2500 VAC, 50 Hz, 1 minute between all terminals and earth, as per IEC 60512-2-11.

Electrical lifetime
50 000 cycles of operation

Ambient conditions

Storage temperature
-40 °C ... +95 °C

Operating temperature
-25 °C ... +85 °C for the switch body and
up to +55 °C for the actuating part

Protection degree
IP20 terminal/case
IP65 front side, as per IEC 60529

Shock resistance
50 g for 11 ms, as per IEC 60512-4-3

Vibration resistance
(sinusoidal)
10 g at 10 Hz ... 2000 Hz, amplitude 0.75 mm,
as per IEC 60512-4-4

Approvals

Approbations
CB (IEC 61058-1)
CSA
ENEC (EN 61058-1)
UL

Conformities
CE
2014/35/EU (LVD)
2011/65/EC (RoHS)

General notes

1. Engraving

In addition to the most commonly used world languages, in DIN1451-3 close spacing, other typefaces are available as Scandinavian, Slavic, Greek, Russian and Polish. Red, blue and black lenses are filled with white colour. Other colour lenses are filled in black. Standard height of letters is 3 mm. If the height is not specified, we will supply 3 mm engraved letters.

2. Hot stamping

For larger series it is worth considering markings by means of hot stamping. We will be pleased to advise you.

3. Film inserts

Instead of using engraving the lenses can be fitted with transparent film inserts, as an alternative. For this purpose, though, it is advisable to use transparent lenses. In the case of use of a smoke-black lens the fitted film becomes readable only if the lamp is on. The film thickness is 0.2 mm.

Important: Consider pushbutton mounting orientation before specifying engraving characters!

Engraving film insert

All dimensions in mm

Film insert max. dimensions	Height of letters h	Number of lines	Number of capital letters per line (guide value)	Number of lowercase letters per line (guide value)	Picture

Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilo-

volts in amplitude even when nominal circuit voltages are low (e.g. 12VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (V_R) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load
Fig. 1

Counter EMF
over load without free-wheeling diode
Fig. 2
