#### **Features**

- Low R<sub>DS(on)</sub>
- Ultra-low Q<sub>G</sub> For High Efficiency
- Logic Level
- Light Weight 0.068 grams
- New Compact Hermetic Package
- Source Sense Pin
- Total Dose
  - Rated to 300 krad
- Single Event
  - SEE immunity for LET of 83.7 MeV/mg/cm<sup>2</sup> with V<sub>DS</sub> up to 100% of rated Breakdown
- Low Dose Rate at 100 mRad/sec
  - Maintains Pre-Rad specification
- Neutron
  - Maintains Pre-Rad specification for up to 1 x 10<sup>15</sup> Neutrons/cm<sup>2</sup>

### **Applications**

- Satellite and Avionics
- Deep Space Probes
- High Speed Rad Hard DC-DC Conversion
- Rad Hard Motor Controllers

### FBG10N05A

Rad Hard eGaN<sup>®</sup> 100 V, 5 A, 45 mΩ Surface Mount (FSMD-A)

### **Description**

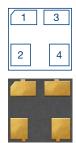

EPC Space series of eGaN® power switching HEMTs have been specifically designed for critical applications in the high reliability or commercial satellite space environments. These devices have exceptionally high electron mobility and a low temperature coefficient resulting in very low  $R_{\rm DS(on)}$  values. The lateral structure of the die provides for very low gate charge ( $Q_{\rm G}$ ) and extremely fast switching times. These features enable faster power supply switching frequencies resulting in higher power densities, higher efficiencies and more compact packaging.

#### **Thermal Characteristics**

Symbol	Parameter-Conditions	Value	Units
$R_{\theta JA}$	Thermal Resistance Junction to Ambient (Note 3)	62	°C/W
$R_{\theta JC}$	Thermal Resistance Junction to Case	10.57	C/VV

#### I/O Pin Assignment (Bottom View)

Pin	Symbol	Description
1	G	Gate
2	D	Drain
3	SS	Source Sense
4	S	Source

### **Absolute Maximum Rating** ( $T_C = 25^{\circ}$ C unless otherwise noted)

Symbol	Parameter-Conditions	Value	Units
V <sub>DS</sub>	Drain to Source Voltage (Note 1)	100	V
I <sub>D</sub>	Continuous Drain Current ID @ V <sub>GS</sub> = 5 V	5	Α
I <sub>DM</sub>	Single-Pulse Drain Current $t_{pulse} \le 80 \ \mu s$	20	A
V <sub>GS</sub>	Gate to Source Voltage (Note 2)	+6 / -4	V
$T_J, T_{STG}$	Operating and Storage Junction Temperature Range -55 to +150		°C
T <sub>sol</sub>	Package Mounting Surface Temperature	260	C
ESD	ESD Class	ΔΑ	

# Electrical Characteristics ( $T_C = 25$ °C unless otherwise noted. Typical (TYP) values are for reference only.)

Parameter	Symbol	Test Cond	ditions	MIN	TYP	MAX	Units
Minimum Drain to Source Voltage	V <sub>DSMIN</sub>	V <sub>G</sub> = 0 V		100	-	-	V

Gate Resistance	R <sub>G</sub>	$f = 1 \text{ MHz}, V_{DS} = V_{GS} = 0 \text{ V}$		0.4		Ω
Total Gate Charge (Note 7)	$Q_{G}$	$I_D = 5 \text{ A}, V_{GS} = 5 \text{ V}, V_{DS} = 50 \text{ V}$		1.7	2.2	
Gate to Drain Charge (Note 7)	$Q_{GD}$	$I_D = 5 \text{ A}, V_{GS} = 5 \text{ V}, V_{DS} = 50 \text{ V}$		0.2	0.6	
Gate to Source Charge (Note 7)	$Q_{GS}$	$I_D = 5 \text{ A}, V_{GS} = 5 \text{ V}, V_{DS} = 50 \text{ V}$		0.5	1.0	nC
Output Charge (Note 8)	Q <sub>OSS</sub>	$V_{GS} = 0 \text{ V}, V_{DS} = 50 \text{ V}$		9.1	-	
Source to Drain Recovery Charge	Q <sub>RR</sub>	$I_D = 5 \text{ A}, V_{DS} = 50 \text{ V}$		<1		

### **Radiation Characteristics**

EPC Space eGaN® HEMTs are tested according to MIL-STD-750 Method 1019 for total ionizing dose validation. Every manufacturing lot is tested for total ionizing dose of Gamma radiation with an in-situ bias for (i)  $V_{GS} = 5 \text{ V}$ , (ii)  $V_{DS} = V_{GS} = 0 \text{ V}$  and (iii)  $V_{DS} = 80\% \text{ B}_{VDSS}$ .

Electrical Characteristics up to 300 krads ( $T_C = 25^{\circ}$ C unless otherwise noted. Typical (TYP) values are for reference only.)

Parameter	Symbol	Test Conditions	MIN	TYP	MAX	Units
Maximum Drain to Source Voltage	V <sub>DSMAX</sub>	$V_{GS} = 0 V$	-	-	100	V
Gate to Source Threshold Voltage	V <sub>GS(th)</sub>	$V_{DS} = V_{GS}$ , $I_D = 1.2 \text{ mA}$	0.8	1.2	2.5	V
Drain to Source Leakage	I <sub>DSS</sub>	$V_{DS} = 100 \text{ V}, V_{GS} = 0 \text{ V}$	-	10	250	
Gate to Source Forward Leakage	I <sub>GSS</sub>	V <sub>GS</sub> = 5 V	-	250	500	μA
Gate to Source Reverse Leakage	I <sub>GSS</sub>	V <sub>GS</sub> = -4 V	-	-20	-60	
Drain to Source Resistance (Note 4)	R <sub>DS(on)</sub>	$I_D = 5 A, V_{GS} = 5 V$	-	-	45	mΩ

### **Typical Single Event Effect Safe Operating Area**

#### **Notes**

- Note 1. NEVER exceed the absolute maximum V<sub>DS</sub> of the device otherwise permanent damage/destruction may result.
- Note 2. NEVER exceed the absolute maximum V<sub>GS</sub> of the device otherwise permanent damage/destruction may result. We recommend use at no greater than +5 V as the HEMT is fully conducting at this point.
- Note 3. R<sub>0JA</sub> measured with FSMD-A package mounted to double-sided PCB, 0.063" thickness with 1.0 square inches of copper area on the top (mounting side) and a flood etch (3 square inches) on the bottom side.
- Note 4. Measured using four wire (Kelvin) sensing and pulse measurement techniques. Measurement pulse width is 80 μs and duty cycle is 1%, maximum.
- Note 5. Operation of the device in the third quadrant region is not recommended.
- Note 6.  $C_{ISS} = C_{GS} + C_{GD}$  with  $C_{DS}$  shorted.  $C_{OSS} = C_{DS} + C_{GD}$ .  $C_{RSS} = C_{GD}$ .
- Note 7. The gate charge parameters are measured using the circuit shown in Figure 11. Qs and associated components BT1, P1 and C1 form a high speed current source that serves as the test load for the DUT. A constant gate current ( $l_{const}$ ) of 1.5-3 mA is provided to the Gate of the DUT during the time that the ground switch ( $G_s$ ) is OFF ( $t_{off}$ ). The DUT is switched ON and OFF using ground-sensed switch GS. The gate current is adjusted to yield the desired charge per unit time ( $l_{const}$  · time per division) on the measuring oscilloscope. The GS pulse drive ON time ( $t_{on}$ ) is adjusted for the desired observability of the gate-source voltage ( $V_{Gs}$ ) waveform. The maximum duty cycle of the ground switch ( $t_{off}$ / $t_{on}$ ) should be set to 1% maximum. Please note that all gate-related signals are referenced to the "Source Sense" pin on the package. At all times during the measurement, the maximum gate-source voltage is clamped to 5  $V_{DC}$ .
- Note 8. Guaranteed by design/device construction. Not tested.

### **EPC Space Part Number Information**
