

# PASSIVE COMPONENTS for the Internet of Things

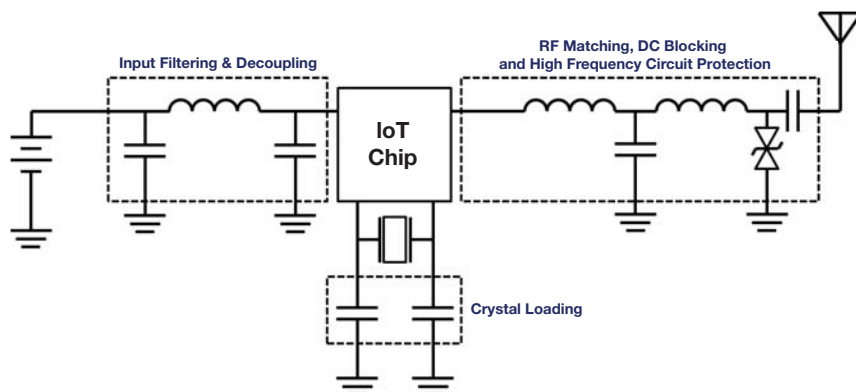

Capacitors, Inductors, and Circuit Protection for RF/Microwave,  
Crystal Loading and Power Circuits in IOT Applications

# IOT DESIGN KIT

Most IoT MCU chips currently require an input voltage filtering/decoupling network, a timing device network, and an output impedance matching network for the RF antenna, which usually communicates using Bluetooth LE, ZigBee, ANT, or other wireless network protocol.

AVX provides passive components suitable for use in all required networks of operation for IoT devices. The diagram below shows an example of a possible use for the components in this kit to get the most out of your IoT device.

Each of these blocks represents an example of how your IoT device might be set up, and all the passive components shown here are included in this kit.
