# Safety Information

## Regulatory Compliance

This Evaluation Kit is intended for use as a development platform for hardware in a laboratory environment. The board is an open system design, which does not include a shielded enclosure. This may cause interference to other electrical or electronic devices in close proximity.

In a domestic environment, this product may cause radio interference. The user may then be required to take adequate prevention measures. Also, the board should not be used near any medical equipment or RF devices.

Attaching additional wiring to this product or modifying the product operation from the factory default may affect its performance and cause interference with other apparatus in the immediate vicinity. If such interference is detected, suitable mitigating measures should be taken.

This Evaluation Kit contains electrostatic discharge (ESD) sensitive devices. Electrostatic charges readily accumulate on the human body and any equipment, and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused this board in the protective shipping package.

## General Safety Instructions

### ESD Protection

ESD can damage boards and associated components. Cypress recommends that you perform procedures only at an ESD workstation. If an ESD workstation is not available, use appropriate ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface) on your board when handling parts.

### Handling Boards

This board is sensitive to ESD. Hold the board only by its edges. After removing the board from its box, place it on a grounded, static-free surface. Use a conductive foam pad if available. Do not slide board over any surface.

# 1. Introduction

Thank you for your interest in the MB39C022G-EVB01 1CH Buck DC/DC Converter and 1CH LDO IC Evaluation Kit (EVK). The kit is designed as an easy-to-use evaluation kit, showcasing the features of the Cypress MB39C022G-EVB01 1CH Buck DC/DC Converter that has fast transient response and 1CH LDO IC has low noise output. For more information, see [the MB39C022G data-sheet](#).

## 1.1 Kit Contents

This evaluation kit includes the following items as shown in [Figure 1-1](#):

- MB39C022G-EVB01 evaluation board
- Quick start guide ([www.cypress.com/MB39C022G-EVB01](http://www.cypress.com/MB39C022G-EVB01))

## 2. Kit Overview

### 2.1 Terminal Information

Terminal Name	I/O	Descriptions
VIN	I	Input power supply terminal
EN1	I	Ch1 DC/DC control terminal EN1 = LOW: VO1 and POR output off EN1 = HIGH: VO1 and POR output on
EN2	I	Ch2 LDO control terminal EN2 = LOW: VO2 output off EN2 = HIGH: VO2 output on
VO1	O	Ch1 DC/DC converter output terminal
VO2	O	Ch2 LOD output terminal
POR	O	Power-on-reset output terminal
PGND	-	Power ground terminal
PGND1	-	Power ground terminal
AGND	-	Analog ground terminal

### 2.2 Specification

Parameter			Value			Unit
			Min	Typ	Max	
Input voltage	Ch1, Ch2	VIN	3.5	3.7	5.5	V
	Ch1	VO1	0.8	1.2	4.5	V
Output voltage	Ch2	VO2	3.23	3.3	3.36	V
	Ch1	I <sub>O1</sub>	0	-	0.6	A
Output current	Ch2	I <sub>O2</sub>	0	-	0.3	A
	Ch1, Ch2	-	-	500	-	kHz

The output voltage of VO1 can be set by the external resistors, see [2.4 Default Settings](#). The applied voltage of VIN should be between the voltage 0.5 V higher than the VO1 setting voltage and 5.5 V.

## 2.3 Hardware

The kit consists of the following components as shown in Figure 2-1:

Figure 2-1. Kit Components

## 2.4 Default Settings

### 1. Output voltage

$$VO1 = \frac{(R5-1 + R5-2) + R6}{R6} \times 0.3 = \frac{(300k + 300k) + 200k}{200k} \times 0.3 \approx 1.2 [V]$$

$$VO2 = 3.3 [V] \text{ (Preset)}$$

## 3. Set Up and Check

### 3.1 Setup and Check

Figure 3-1. Terminals for Setup and Check

#### Setup\*

1. Connect VIN to a power supply and PGND to the ground.
2. Connect EN1 and EN2 to VIN.
3. Connect VO1 to a voltmeter.
4. Connect VO2 to a voltmeter.

#### Check\*

1. Apply 3.7 V to VIN.
2. VO1 voltage (DC/DC output) should be 1.2 V (typ) and VO2 voltage (LDO output) should be 3.3 V (typ)

\*Do not supply power to VIN until settings are completed.
