## MCS6.A

### Description:

NB-IoT / CAT M1 Low Profile 4G SMD Dielectric Antenna

### Features:

GSM / CDMA / DCS / PCS / WCDMA / UMTS / HSDPA / GPRS / EDGE

NB-IoT / CAT M1 Bands

698~960MHz / 1710~2690MHz

High Efficiency Multi-Band SMD antenna

Low profile 42\*10\*3mm

RoHS & REACH Compliant

# 1. Introduction

The MCS6.A is a low profile SMD NB-IoT / CAT M1 Bands / 4G/3G/2G embedded antenna designed for direct SMD mount on a device PCB. It provides high efficiency in a very small form factor of just 42\*10\*3mm.

NB-IoT / CAT M1 is a low power wide area (LPWA) technology specifically designed for IoT and M2M. NB-IoT / CAT M1 technology offers lower maintenance cost, with greater efficiency and reliability by reducing power consumption and providing deeper penetration compared to standard cellular technologies. It operates on secure mobile networks making it suited to automotive, smart meter, medical and smart city applications.

If tuning is required, the MCS6.A can be tuned for the device environment without the need for new tooling. Its rectangular shape and very small size make it very easy to integrate. It is supplied on tape and reel ensuring that it can be mounted via pick and place to reflow solder directly on the edge of the PCB board.

This antenna is recommended to be used with longer ground-plane lengths of 120mm or more to attain its highest rated efficiency. Note the Return Loss and Efficiency graphs on Page 16.

Contact your regional Taoglas Customer Support Team for quick and professional support from our senior engineering team on integration and matching of the antenna to your device.

## 2. Specifications

Electrical							
Frequency (MHz)	Band 2		Band 4		Band 12		
	Tx	Rx	Tx	Rx	Tx	Rx	
	1850-1910	1930-1990	1710-1755	2110-2155	699-716	729-746	
<b>Peak Gain (dBi)</b>							
On Evaluation Board	2.76	3.26	3.11	3.75	-1.05	-0.02	
<b>Average Gain (dB)</b>

## 5. Mechanical Drawing - Antenna

### 5.1 Mechanical Drawing

## 5.2 Footprint

### FootPrint

#### Top Copper

Pads 1 and 2 are the same size, Pads 3 and 4 are the same size, Pad 4 should be connected to a 50 ohm transmission line.

B

Pin/Pad Number	Value
1	NC (No connect / Open)
2	NC (No connect / Open)
3	Ground
4	Feed Line

#### Top Solder Paste

Pads 1 and 2 are the same size, Pads 3 and 4 are the same size.

#### Top Solder Mask

#### Composite Diagram

#### NOTE:

1. Au Plated area
2. Solder Mask area
3. Copper area
4. Paste area
5. Keepout Region area
6. Silkscreen
7. Soldermask

8. Ground keepout should extend through any inner PCB layers and any sides around the antenna till the board edge to minimize coupling from RF feed to ground, except the side facing system ground.
9. Any vias in pads should be either filled or tented to prevent solder from wicking away from the pad during reflow.
10. The dimension tolerances should follow standard PCB manufacturing guidelines.

## 6. Antenna Integration Guide

## 6.1 Schematic Symbol and Pin Definition

The circuit symbol for the antenna is shown below. The antenna has 4 pins with only two pins (Pin 1 and Pin 2) as functional. Pins 3 and 4 are for mechanical strength.

Pin	Description
1	RF Feed
2	Ground
3,4	Mechanical, Not Connected

MCS6.A  
ANT1

## 6.2 Antenna Integration

For any given PCB size, the antenna should ideally be placed on the PCB's longest side, to take advantage of the ground plane. Optimized matching components can be placed as shown.

Top Side w/ Solder Mask

Top Side w/o Solder Mask

## 6.3 PCB Layout

The footprint and clearance on the PCB must meet the layout drawing in (Footprint Drawing). Note the placement of the optimized components. L1 is placed as close as possible to the RF feed (pad 1) but still within the transmission line. C1 is then placed tightly in series after that. C2 is an optional component but the footprint is recommended in case it is needed.

Topside

Bottom Side

## 6.4 PCB Clearance

Below shows the antenna footprint and clearance through ALL layers on the PCB. Only the antenna pads and connections to feed and GND are present within this clearance area (marked RED). The clearance area extends to 2.8mm in length & 10.6mm in width from the centre of the PCB. This clearance area includes the bottom side and ALL internal layers on the PCB.

Topside

Bottom Side

6.5 Evaluation Board

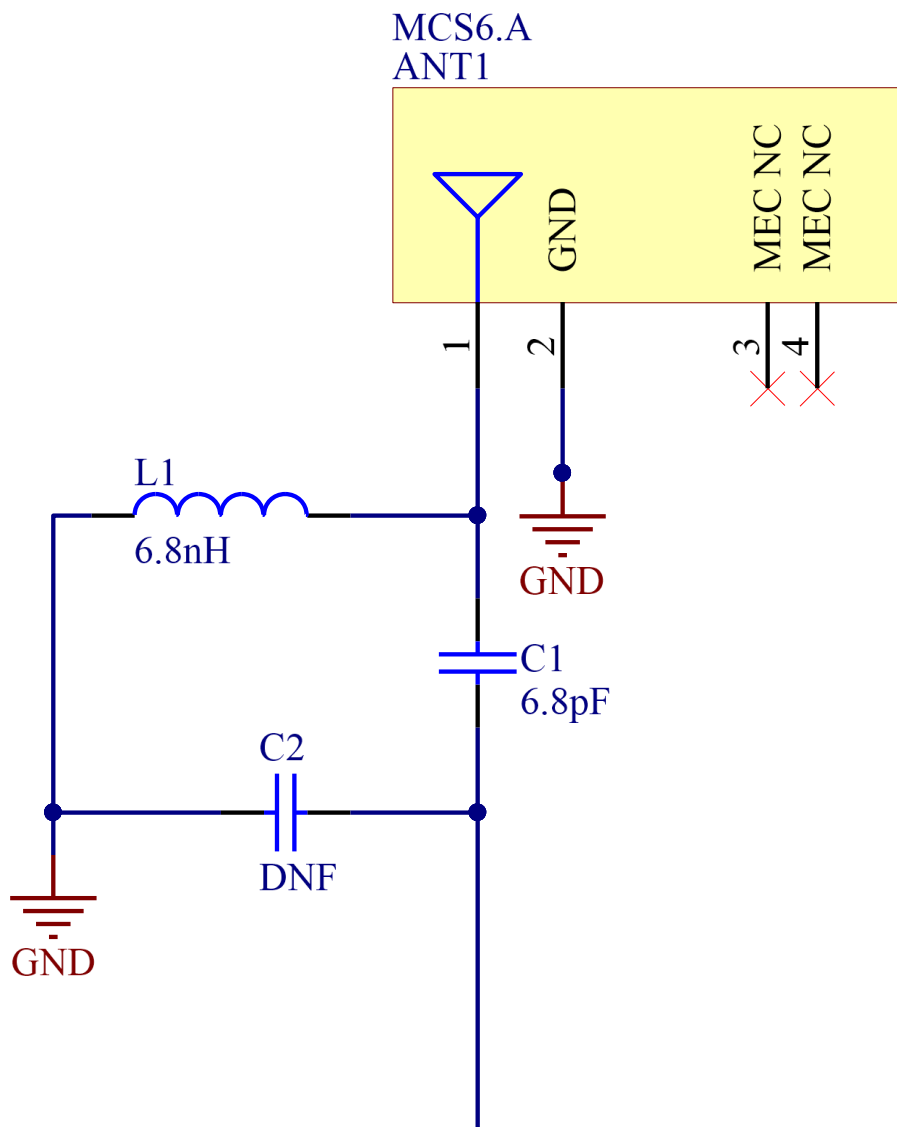

Topside

## 6.6 Evaluation Board Matching Circuit

A matching component (L1) in parallel with the MCS6.A is required for the antenna to have optimal performance on the evaluation board, located outside of the ground plane in the space specified in the above images. Additional matching components may be necessary for your device, so we recommend incorporating extra component footprints, forming a “pi” network, between the cellular module and the edge of the ground

Designator	Type	Value	Manufacturer	Manufacturer Part Number
L1	Inductor	6.8nH	TDK	MLK1005S6N8DT000
C1	Capacitor	6.8pF	Murata	GRM1555C1H6R8CA01D
C2	Capacitor	Not Fitted	-	-

5	6.8pF Capacitor (0402)	001512I000055A	Ceramic	N/A	1

## 8. Packaging

1000 pcs MCS6.A reel  
 Dimensions - 330\*330\*60mm  
 Weight - 2kg

1000 pcs MCS6.A / 1 Reel in small box  
 Dimensions - 335\*340\*90mm  
 Weight - 2.1Kg

4 reels, 4000 pcs in one carton  
 Carton Dimensions - 370\*360\*370mm  
 Weight - 9.2Kg

Pallet Dimensions 1200\*1000\*1310mm  
 18 Cartons per Pallet  
 6 Cartons per layer  
 3 Layers

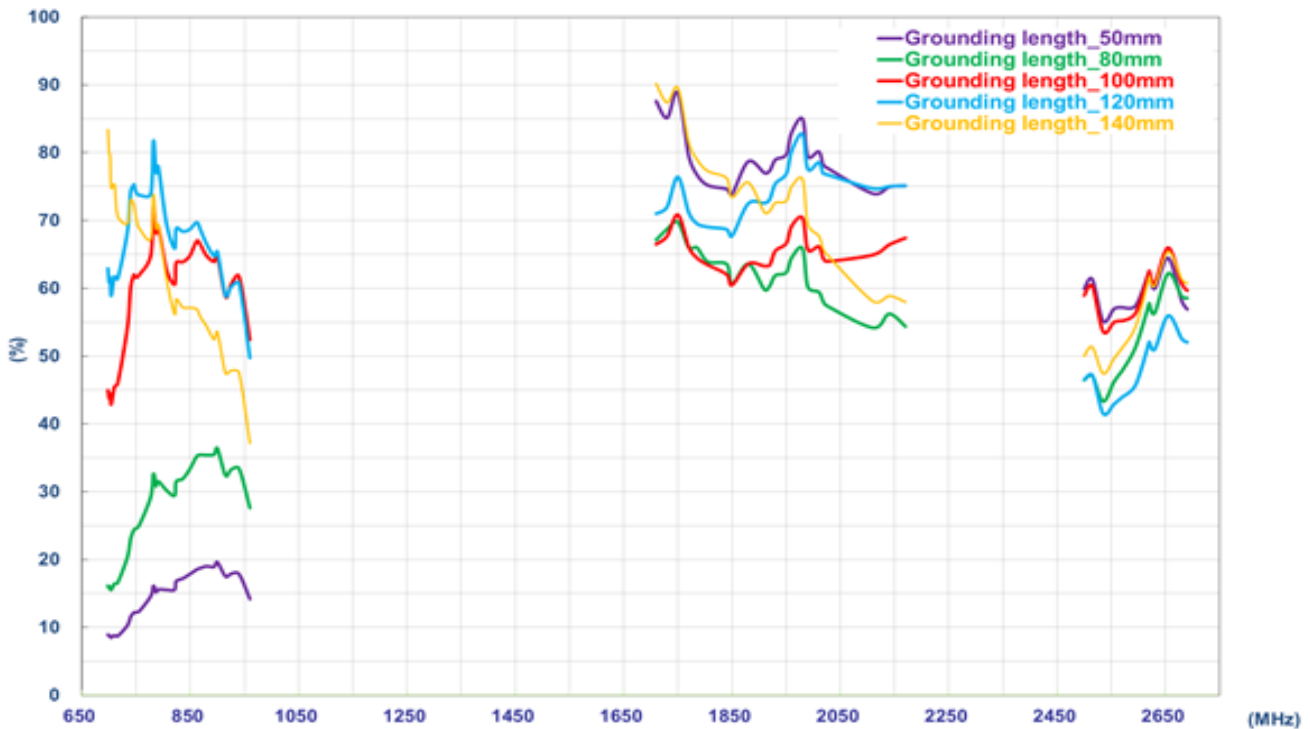

## 9. Application Note

### 9.1 Return Loss

### 9.2 Efficiency

### 9.3 Peak Gain

### 9.4 Average Gain
