# Thermoplastic rubber wheels

Technopolymer centre body

## COVERING

Grey anti-trace thermoplastic wheel, hardness 85 Shore A.

Polypropylene-based (PP) technopolymer.

## **ROLLING ACTION**

Hub with pass-through hole.

### **APPLICATIONS**

Excellent rolling resistance and elasticity features. For selection parameters see Technical data (on page 1875).

RE.G1 wheels are also supplied with steel sheet bracket RE.G1-N (see page 1857).

Suitable for use in humid environments and in the presence of medium-aggressive chemical environments; use in environments with the presence of organic, chlorinated solvents, hydrocarbons and mineral oils is not recommended.

The diagram shows the force to be applied to a wheel to keep it moving at the constant speed of 4 km/h, according to the applied load.

The intersection point with a 50N value is the maximum transportable load with a manually actuated 4-wheel trolley; in fact,  $200N = 50N \times 4$  wheels is the maximum force that may be supported by the operator according to the regulations in force regarding work safety.

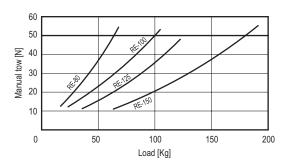

### MECHANICAL MOVING WITH TOWING DEVICES

For mechanical towing, please see the technical specifications to determine the capacity variation.

#### **TEMPERATURE**

If operating temperatures in an application differ from the standard range of values, please see the technical specifications to determine the capacity variation.
