

MPIA4040

Automotive Grade

High Current, High Frequency, Miniature Power Inductors

Product description:

- AEC-Q200 Grade 3 qualified
- Handles high transient inrush current spikes
- Magnetically shielded
- Frequency range: 10kHz to 10MHz
- Inductance range from 0.02µH to 22µH
- Current range from 1.1A to 3.2A
- 4.7 x 4.31 footprint surface mount package in 1.2, 1.5, 1.75 or 2.0mm heights
- Rugged construction
- Halogen free, lead free, RoHS compliant

Applications:

- Body electronics
 - Central body control module
 - Vehicle access control system
 - Headlamps, tail lamps and interior lighting
 - Door control
 - Advanced driver assistance systems
 - 77GHz radar systems
 - Automatic parking control
 - Collision avoidance system
 - Basic and smart surround, and rear and front view camera
 - Adaptive Cruise Control (ACC)
 - Car black box system
 - Infotainment and cluster electronics
 - Active noise cancellation (ANC)
 - Audio subsystem: head unit and trunk amp
 - Digital instrument cluster
 - In-vehicle infotainment (IVI) and navigation
 - Port power/USB hub for front and rear passengers
 - Chassis and safety electronics
 - Airbag control unit
- Environmental data:**
- Storage temperature range (component): -55°C to +125°C
 - Operating temperature range: -55°C to +125°C (ambient plus self temperature rise)
 - Solder reflow temperature: J-STD-020D compliant

Discontinued, Effective September 15, 2016
inventory is depleted. Recommended replacement MPIA40-V1

1 Open Circuit Inductance (OCL) Test Parameters: 10kHz, 0.10V_{rms}, 0.0A dc

2 I_{rms}: DC current for an approximate temperature rise of 40°C without core loss. De-rating is necessary for AC currents. Temperature rise is dependent upon several factors, including the PCB pad layout, trace thickness and width, air-flow and proximity to other heat generating components. It is recommended the part temperature not exceed 25°C under worst case operating conditions and therefore, the temperature rise should be verified in the end use application. Irms testing was performed on a 19.05mm long x 6.35mm wide x 0.070mm thick copper trace in still air.

3 I_{sat}: Peak current for approximately 30% rolloff at +25°C.

4 K-factor: Used to determine B_{p-p} for core loss (see graph). B_{p-p} = K * L * DI. B_{p-p} : (Gauss), K: (K-factor from table), L: (inductance in µH), DI (peak-to-peak ripple current in amps).

5 Part Number Definition: MPIA4040RX-XXX-R

- MPIA4040X = product code and size
- XXX = inductance value in all, "R" = decimal point
- If no "R" is present, then third digit equals the number of zeros
- "-R" suffix = RoHS compliant

† Transient pulse not to exceed 1 millisecond.

†† Maximum operating frequency less than 10MHz, consult factory for application specific values.

Dimensions - mm

Part #	A Max
MPIA4040R1-xxx-R	1.2
MPIA4040R2-xxx-R	1.5
MPIA4040R3-xxx-R	1.8
MPIA4040R4-xxx-R	2.0

Part Marking: L xabcd
 L = Automotive product
 x = height: 1 = R1 (1.2mm), 2 = R2 (1.5mm), 3 = R3 (1.85mm), 4 = R4 (2.0mm)
 a = inductance value per the "Part Marking Designator" letter code in table above
 b = Bi-weekly date code
 c = Last digit of year manufactured
 d = Revision level

Soldering surfaces to be coplanar within 0.1016 millimeters
 PCB tolerances +/- 0.1mm unless otherwise specified
 Do not route traces or vias underneath the inductor

Packaging information - mm

Supplied in tape and reel packaging:

- MPIA4040R1 = 5,000 parts per 13" diameter reel
- MPIA4040R2 = 4,500 parts per 13" diameter reel
- MPIA4040R3 = 3,500 parts per 13" diameter reel
- MPIA4040R4 = 3,000 parts per 13" diameter reel
