ESDR7534

ESD Protection Diode

Low Capacitance ESD Protection for LVDS Interfaces

The ESDR7534 surge protection is designed to protect high speed data lines from ESD, EFT, and lightning.

Features

- Low Capacitance (2 pF Maximum Between I/O Lines and GND)
- Protection for the Following IEC Standards:
  IEC 61000−4−2 (ESD) Level 4 − ±30 kV (Contact); ±30 kV (Air)
- This is a Pb−Free Device

MAXIMUM RATINGS (T_J = 25°C unless otherwise noted)

Rating	Symbol	Value	Unit
Peak Power Dissipation (Note 1)	P_{pk}	300	W
Maximum Peak Pulse Current 2/10 μs @ T_A = 25°C	I_{PP}	10	A
Operating Junction Temperature Range	T_J	−55 to +125	°C
Storage Temperature Range	T_{stg}	−55 to +150	°C
Lead Solder Temperature − Maximum (10 Seconds)	T_L	260	°C
IEC 61000−4−2 Contact IEC 61000−4−2 Air ISO 10605 330 pF / 330 Ω Contact ISO 10605 330 pF / 2 kΩ Contact ISO 10605 150 pF / 2 kΩ Contact	ESD	±30 ±30 ±30 ±30 ±30	kV

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. P_{pk} calculated. $P_{pk} = V_C \times I_{PP}$.

Table 1. PIN DESCRIPTIONS

4−Channel, 6−Lead SC70−6			
Pin	**Name**	**Type**	**Description**
1	CH1	I/O	ESD Channel
2	V_N	GND	Negative Voltage Supply Rail
3	CH2	I/O	ESD Channel
4	CH3	I/O	ESD Channel
5	V_P	PWR	Positive Voltage Supply Rail

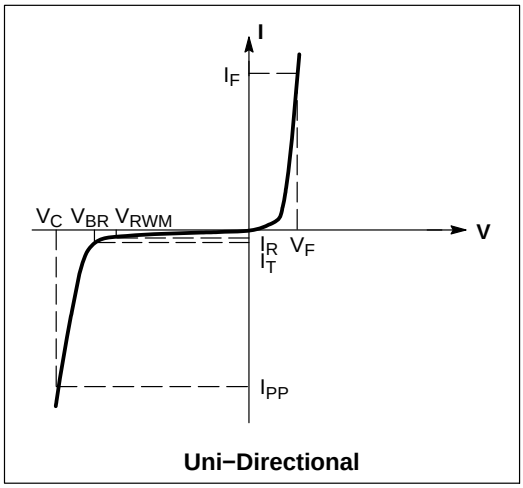
ELECTRICAL CHARACTERISTICS

(T_A = 25°C unless otherwise noted)

Symbol	Parameter
I_{PP}	Maximum Reverse Peak Pulse Current
V_C	Clamping Voltage @ I_{PP}
V_{RWM}	Working Peak Reverse Voltage
I_R	Maximum Reverse Leakage Current @ V_{RWM}
V_{BR}	Breakdown Voltage @ I_T
I_T	Test Current
I_F	Forward Current
V_F	Forward Voltage @ I_F
P_{pk}	Peak Power Dissipation
C	Capacitance @ V_R = 0 and f = 1.0 MHz

*See Application Note AND8308/D for detailed explanations of datasheet parameters.



Uni−Directional

ELECTRICAL CHARACTERISTICS (T_A=25°C unless otherwise specified)

Parameter	Symbol	Conditions	Min	Typ	Max	Unit
Reverse Working Voltage	V_{RWM}	(Note 1)			5.0	V
Breakdown Voltage	V_{BR}	I_T = 1 mA, (Note 2)	6.0	8.0	9.5	V
Reverse Leakage Current	I_R	V_{RWM} = 5 V			3.0	μA
Forward Voltage	V_F	I_F = 100 mA			1.6	V
Clamping Voltage	V_C	I_{PP} = 10 A (2/10 μs Waveform)			30	V
Maximum Peak Pulse Current	I_{PP}	2/10 μs Waveform			10	A
Junction Capacitance	C_J	V_R = 0 V, f = 1 MHz between I/O Pins and GND		1.3	2.0	pF
Junction Capacitance	C_J	V_R = 0 V, f = 1 MHz between I/O Pins, V_P floating		0.7	1.0	pF

1. Surge protection devices are normally selected according to the working peak reverse voltage (V_{RWM}), which should be equal or greater than the DC or continuous peak operating voltage level.
2. V_{BR} is measured at pulse test current I_T.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

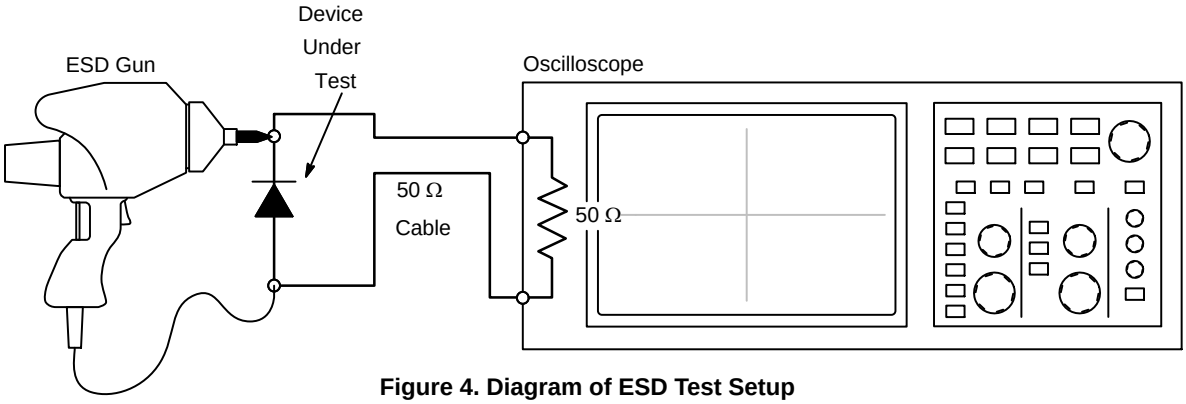

Figure 4. Diagram of ESD Test Setup

The following is taken from Application Note AND8308/D − Interpretation of Datasheet Parameters for ESD Devices.

ESD Voltage Clamping

For sensitive circuit elements it is important to limit the voltage that an IC will be exposed to during an ESD event to as low a voltage as possible. The ESD clamping voltage is the voltage drop across the ESD protection diode during an ESD event per the IEC61000−4−2 waveform. Since the IEC61000−4−2 was written as a pass/fail spec for larger systems such as cell phones or laptop computers it is not clearly defined in the spec how to specify a clamping voltage at the device level. ON Semiconductor has developed a way to examine the entire voltage waveform across the ESD protection diode over the time domain of an ESD pulse in the form of an oscilloscope screenshot, which can be found on the datasheets for all ESD protection diodes. For more information on how ON Semiconductor creates these screenshots and how to interpret them please refer to AND8307/D.

APPLICATIONS INFORMATION

The new ESDR7534 is a low capacitance surge protection diode array designed to protect sensitive electronics such as communications systems, computers, and computer peripherals against damage due to ESD events or transient overvoltage conditions. Because of its low capacitance, it can be used in high speed I/O data lines. The integrated design of the ESDR7534 offers low capacitance steering diodes and an internal surge protection diode (V_P diode) integrated in a single package. If a transient condition occurs, the steering diodes will drive the transient to the positive rail of the power supply or to ground. The surge protection device protects the power line against overvoltage conditions to avoid damage to the power supply and any downstream components.

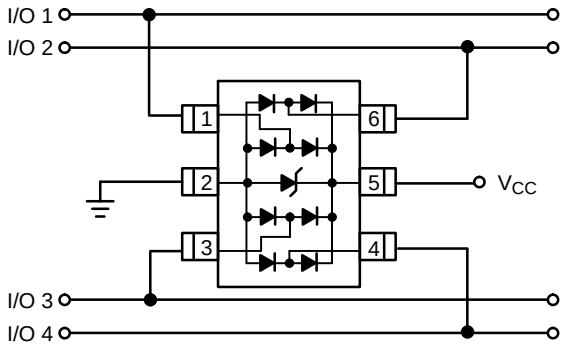
ESDR7534 Configuration Options

The ESDR7534 is able to protect up to four data lines against transient overvoltage conditions by driving them to a fixed reference point for clamping purposes. The steering diodes will be forward biased whenever the voltage on the protected line exceeds the reference voltage (V_f or $V_{CC} + V_f$). The diodes will force the transient current to bypass the sensitive circuit.

Data lines are connected at pins 1, 3, 4 and 6. The negative reference is connected at pin 2. This pin must be connected directly to ground by using a ground plane to minimize the PCB's ground inductance. It is very important to reduce the PCB trace lengths as much as possible to minimize parasitic inductances.

Option 1

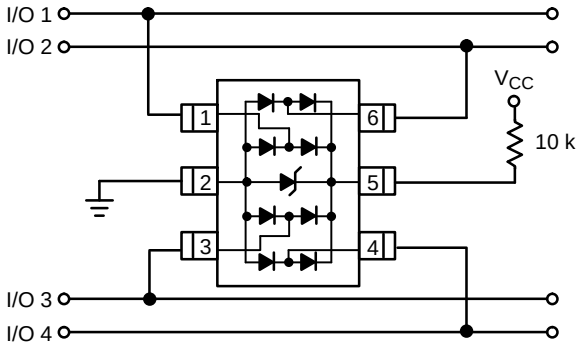
Protection of four data lines and the power supply using V_{CC} as reference.



For this configuration, connect pin 5 directly to the positive supply rail (V_{CC}), the data lines are referenced to the supply voltage. The V_P diode prevents overvoltage on the supply rail. Biasing of the steering diodes reduces their capacitance.

Option 2

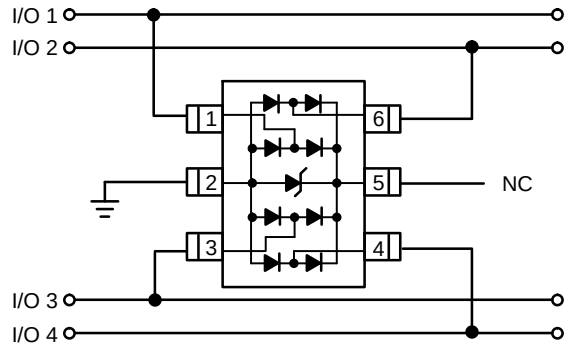
Protection of four data lines with bias and power supply isolation resistor.



The ESDR7534 can be isolated from the power supply by connecting a series resistor between pin 5 and V_{CC}. A 10 kΩ resistor is recommended for this application. This will maintain a bias on the V_P and steering diodes, reducing their capacitance.

Option 3

Protection of four data lines using the V_P diode as reference.



In applications lacking a positive supply reference or those cases in which a fully isolated power supply is required, the V_P can be used as the reference. For these applications, pin 5 is not connected. In this configuration, the steering diodes will conduct whenever the voltage on the protected line exceeds the V_{BR} of the I/O (CHX) pin.

NOTES:
1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSIONS D AND E1 DO NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.20 PER END.
4. DIMENSIONS D AND E1 AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY AND DATUM H.
5. DATUMS A AND B ARE DETERMINED AT DATUM H.
6. DIMENSIONS b AND c APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.08 AND 0.15 FROM THE TIP.
7. DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.08 TOTAL IN EXCESS OF DIMENSION b AT MAXIMUM MATERIAL CONDITION. THE DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OF THE FOOT.
