11. Notes and Cautions

Dongle is not designed to last for a lifetime. Like general products, it is expected to be worn out after continuous usage over several years. To assure that the product will perform better and last longer, please make sure you:

- Follow the guidelines of this document while working with the product. Any discrepancy of core Bluetooth technology and technical specification of IC should refer to the definition of Bluetooth Organization and Nordic Semiconductor as final reference.
- Do not supply voltage that is not within range of specification.
- Eliminate static electricity at any cost when working with the dongle without casing as it may cause damage to the PCBA. It is highly recommended using anti-ESD measurements when working with the dongle without casing or during assembly to prevent damage from real-life ESD events.
- Do not expose modules under direct sunlight for longer periods of time. Dongles should be kept away from humid and salty air conditions, and any corrosive gasses or substances. Store it within -40°C to $+75^{\circ}\text{C}$ before and after installation.
- Avoid any physical shock or intense stress to the dongle or its surface.
- Do not wash the dongle. No-Clean Paste is used in production. Washing it will oxidize the metal shield on the module and have chemistry reaction with No-Clean Paste. Functions of the dongle are not guaranteed if it has been washed.

The dongle is not suitable for life support devices or systems and is not allowed to be used in destructive devices or systems in any direct or indirect ways. The customer agrees to indemnify Raytac for any losses when using dongle(s) in applications such as the ones described above.
