Interface Products

Often, the simplest method to send data between two or more electronic devices is to use a Universal Asynchronous Receiver/Transmitter (UART) and a serial transceiver. MaxLinear offers a broad portfolio of industry-leading UART, serial transceiver and bridging solutions, including the industry's fastest data rate and smallest package UARTs. In addition, MaxLinear provides a complete family of general purpose input/output (GPIO) expanders. These GPIO devices enable design engineers to easily increase the number of I/O ports provided by a particular processor or to add application-specific functionality to embedded systems.

Synergistic Interface Solutions

MaxLinear's interface products find ready application in a wide range of market segments, from industrial controls and telecommunications to consumer electronics and the burgeoning Internet of Things (IoT). MaxLinear has led the industry in UART and serial transceivers by developing a complete line of interface products that are engineered to work in concert with each other as well as with industry standards. MaxLinear's serial transceiver and GPIO expander portfolios include pin-compatible replacements and upgrades in industry-standard pinouts. Software drivers, including source code, that are available for download from MaxLinear's website. Custom driver development is also available, contact your local MaxLinear Sales representative or contact Technical Support at www.maxlinear.com/contact-us

USB Ethernet Bridges with I²C Master, UARTs, GPIOs

MaxLinear USB Ethernet bridges add Ethernet connectivity to any system with an available USB port. Designed for embedded and industrial applications where space is at a premium, MaxLinear's USB Ethernet bridges pack the most functionality in the smallest package. The XR22800 and XR22801 USB Ethernet devices, which integrate an I²C master and multiple GPIOs, are delivered in a 5mm by 5mm QFN package. Even the XR22804, which bridges USB to Ethernet and integrates four UARTs, an I²C master and 32 GPIOs, is delivered in a compact 8mm by 8mm footprint. Other devices in similar package sizes only offer USB to Ethernet. All of MaxLinear's USB Ethernet products are designed for reliability in consumer and industrial environments and provide the industry's highest level of ESD protection at ±15kV HBM.

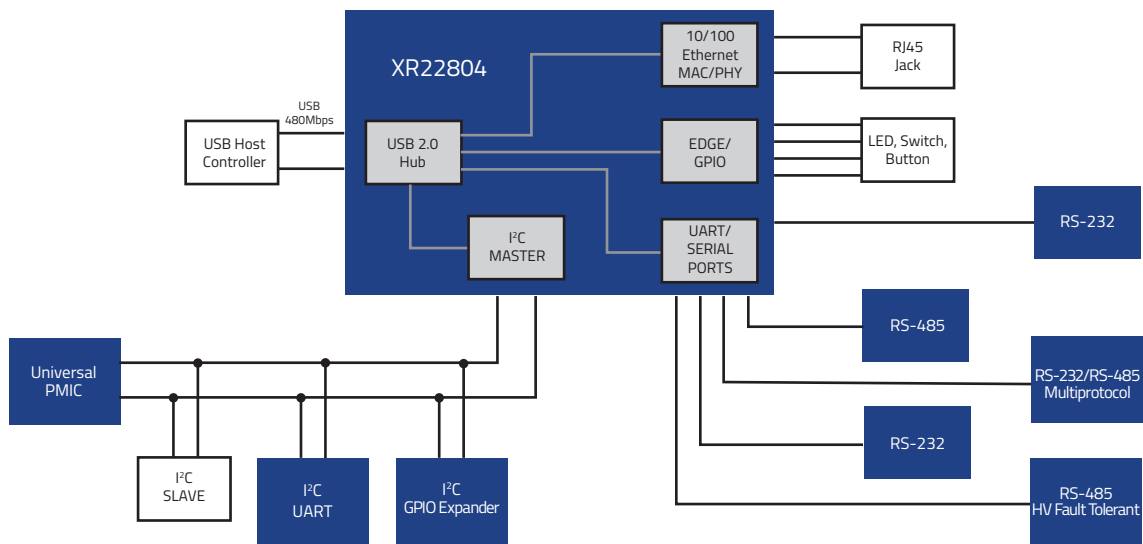

Development is simple with MaxLinear's USB bridging products. The devices work with standard software drivers in Windows, Linux, Android and Mac OS. For those designers who need to get to market quickly, enhanced features such as RS-485 Half-Duplex Control and 9-bit or Multidrop Mode can be enabled in MaxLinear's USB bridges to simplify software and hardware development. Custom software drivers and applications are also available or for those instances where a standard driver is not available or where unique functionality is required. For example, the UART ports are easily configured for any non-standard baud rate over 300 bps and the GPIOs are readily tailored for enhanced functionality. All of MaxLinear's custom Windows drivers are certified to the Microsoft WHQL standard to ensure compatibility and reliable performance.

Applications

- Point-of-Sale (POS) systems
- Docking stations
- USB Ethernet dongles
- Serial port expander
- Embedded connectivity

Connectivity Bridges the I/O Gaps in the IoT Landscape

MaxLinear USB UART devices are designed for peripheral or inter-system communication and offer up to four UART ports in an ultra-compact package. These USB UART bridges are designed for serial communication devices where space is at a premium. Such peripherals include keyboards, mice, barcode scanners, receipt printers and wireless modules. MaxLinear offers the industry's smallest USB UART devices targeted for these applications. The XR21B1411 and XR21V1410, for example, are delivered in 3mm by 3mm QFN packages.

All of MaxLinear's USB UART products are designed for reliability in consumer and industrial environments. Error checking is built in with MaxLinear's "Wide Mode" feature. This enables software to check error and status bits concurrently with data. For applications where the USB interface may be disconnected and reconnected while a COM port is still open, MaxLinear provides the XRUSB1 Windows driver that eliminates the need to close the COM port in the host application. To ensure robust operation and reliability in consumer and industrial environments, XR21B series devices also offer the industry's highest level of ESD protection of up to ±15kV HBM.

Development is simple with MaxLinear's USB UART bridging products. The devices work with the standard software drivers in Windows, Linux, Android and Mac OS. For those designers who need to get to market quickly, enhanced features such as RS-485 Half-Duplex Control and 9-bit or Multidrop Mode can be enabled in MaxLinear's USB UART devices to simplify software and hardware development. Custom software drivers and applications are also available or for those instances where a standard driver is not available or where unique functionality is required. For example, MaxLinear USB UARTs are easily configured for any non-standard baud rate over 300bps and the GPIOs are readily tailored for enhanced functionality. All of the custom Windows drivers are certified to the Microsoft WHQL standard to ensure compatibility and reliable performance.

Applications

- Point-of-Sale (POS) systems
- USB to RS-232 dongle
- RS-232 debug port replacement
- Serial port expander
- Wearables

USB UART Data Throughput vs. Competitor

PCIe UARTs

The XR17V35x PCIe UARTs are designed for use in system boards or add-in cards. The 4-channel and 8-channel versions are pin compatible so a single design can support 4 or 8 ports depending on the end customer's requirements. The 4-channel and 8-channel PCIe UARTs have a proprietary master/slave expansion bus interface that enables up to 16 ports on a single x1 PCIe lane.

The XR17V35x PCIe UARTs are software compatible with the industry-standard 16550 UARTs. Native support for MaxLinear's PCIe UARTs is built-in to the latest Linux kernels. Custom software drivers for Windows, Windows Server and Linux are also available from MaxLinear.

Applications

- **Multi-port RS-232/RS-422/RS-485 cards**
- **Point-of-Sale (POS) systems**
- **Factory automation and process control**
- **Network management**
- **Vending, ticketing and gaming**

Part Number	CPU Interface	UARTs	Max Data Rate (Mbps)	Tx/Rx FIFO (Bytes)	Auto RS-485 Half-Duplex Control	Multi-Drop (9-bit) Mode	Fractional Baud Rate Generator	GPIOs	Supply Voltage Range V _{CC} (V)	PCI Interface Voltage Range V _{IO} (V)	Max UART/GPIO Input Voltage (V)	Max UART/GPIO Output Voltage (V)	Temp Range (°C)	Packages

I²C/SPI UARTs

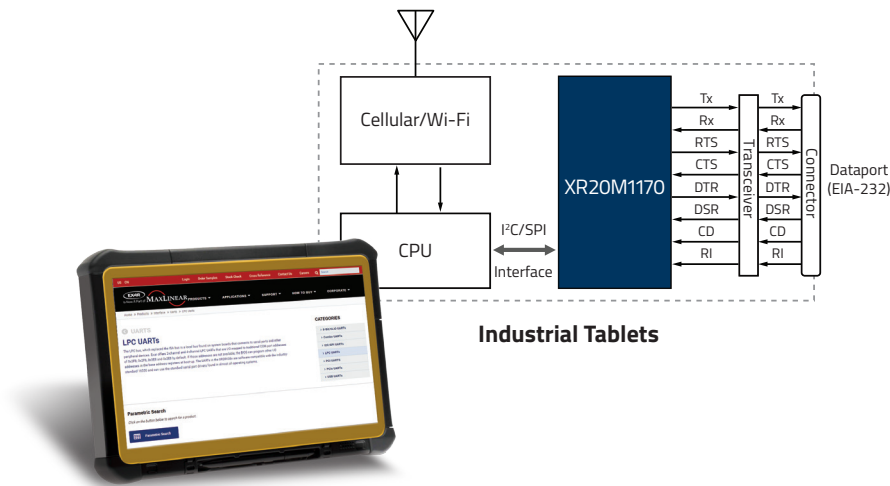

MaxLinear's I²C/SPI UARTs can easily be added to an embedded system design using a simple 2-wire (I²C) or 4-wire (SPI) interface. In addition to the UART ports, the XR20Mxxxx has up to 8 GPIOs that can be used for controlling or monitoring different functions in the embedded system.

A custom Linux software driver is available for download from MaxLinear website. For further technical assistance, please contact MaxLinear's UART technical support team.

Applications

- Mobile phones
- Tablets
- Embedded systems
- Diagnostic ports
- Industrial control

Part Number	CPU Interface	UARTs	Max Data Rate 3.3V/2.5V/1.8V (Mbps)	Tx/Rx FIFO (Bytes)	Auto RS-485 Half-Duplex Control	Multi-Drop (9-bit) Mode	Integrated Level Shifters	Supply Voltage Range V _{CC} (V)	Max UART/GPIO Input Voltage (V)	Max UART/GPIO Output Voltage (V)	Temp Range (°C)	GPIOs	Packages

LPC UARTs

The LPC bus, which replaced the ISA bus is a local bus found on system boards that connects to serial ports and other peripheral devices. MaxLinear offers 2-channel and 4-channel LPC UARTs that are I/O mapped to traditional COM port addresses of 0x3F8, 0x2F8, 0x3E8 and 0x2E8 by default. If those addresses are not available, the BIOS can program other I/O addresses in the base address registers at boot-up. The UARTs in the XR28V38x are software compatible with the industry-standard 16550 and can use the standard serial port drivers found in almost all operating systems.

Applications

- System boards
- Embedded computers
- Diagnostic ports
- Serial port

Part Number	Data Bus Interface	UARTs	Max Data Rate (Mbps)	Tx/Rx FIFO (Bytes)	Auto RS-485 Half-Duplex Control	Multi-Drop (9-bit) Mode	5V Tolerant Inputs	Supply Voltage Range V _{CC} (V)	Watchdog Timer	Max UART/GPIO Input Voltage (V)	Max UART/GPIO Output Voltage (V)	Temp Range (°C)	Packages

1-Channel

MaxLinear's 8-bit UARTs are the industry's largest UART product family offering devices from 1 to 8 channels and FIFO sizes up to 128 Bytes. Each UART has a parallel 8-bit bus interface. The UART offloads the serialization and de-serialization of the data from the MCU or processor. The enhanced features simplify hardware design and software development. The "Intel" interface has separate address, data, read and write lines. The "Motorola" interface has separate address and data lines, but the read/write lines are shared. The "VLIO" interface has separate read and write lines, but the address and data lines are multiplexed. Almost all of the 8-bit UARTs are compatible with the industry-standard 16550 UARTs, hence, they can use the standard serial port drivers in almost all operating systems.

Applications

- Mobile phones
- Tablets
- Diagnostic ports
- Point-of-Sale (POS) systems
- Barcode scanners

Navigation and Fleet Management

2-Channel

The 2-channel 8-bit UART family integrates 2 UARTs into a single package and further simplifies the hardware design by eliminating redundant external components. In the "Intel" mode, there is a chip select and interrupt pin per channel. In the "Motorola" mode, there is only 1 chip select and 1 interrupt pin.

Most UARTs in this family are software compatible with the industry-standard 16550 UART, so they can be used with the standard serial port drivers in most operating systems.

Applications

- Multi-port RS-232/RS-422/RS-485 cards
- Point-of-Sale (POS) systems
- Factory automation and process control
- Network management
- Vending, ticketing and gaming

4-Channel and 8-Channel

The 4-channel and 8-channel product families integrate 4 and 8 UARTs into a single package. In addition, the XR16L784 and XR16xx98 families also support a single chip select and single interrupt pin in both the “Intel” and “Motorola” mode to simplify the hardware design. These devices also have a global interrupt status register so the software can quickly determine which UART generated the interrupt without having to check the status of all of the individual UART channels.

Almost all of these UARTs are based on the industry-standard 16550 UART, and are therefore compatible with standard serial port drivers. However, some driver customization may be required. Assistance for customizing software drivers is available from MaxLinear’s UART technical support team.

Applications

- Multi-port RS-232/RS-422/RS-485 cards
- Point-of-Sale (POS) systems
- Factory automation and process control
- Network management
- Vending, ticketing and gaming

Combo UARTs

MaxLinear's Combo UARTs combine a single channel Universal Asynchronous Receiver and Transmitter (UART) with a serial transceiver. They are designed to operate from a single 3.3V or 5V supply.

Applications

- Battery-Powered Equipment
- Handheld and Mobile Devices
- Handheld Terminals
- Industrial Peripheral Interfaces
- Point-of-Sale (POS) Systems

Part Number	Description	Data Bus Interface	# of Channels	Max Data Rate 5V/3.3V (Mbps)	Tx/Rx FIFO (Bytes)	FIFO Level Counters	Selectable / Programable Trigger Levels	5V Tolerant Inputs	Supply Voltage Range V _{CC} (V)	Max UART/GPIO Output Voltage (V)	Temp Range (°C)	Packages

I²C/SMBus and SPI GPIO Expanders

The I²C/SMBus GPIO expanders are pin and software compatible to existing 8-bit and 16-bit I²C/SMBus GPIO expanders, but with enhanced features and functionality such as:

- Individually programmable interrupt masks
- Interrupts on rising edge, falling edge or both edges
- Internal pull-up resistor enable/disable
- Stored interrupt status mode
- Input glitch filtering
- Tri-stateable outputs

The SPI GPIO expanders are not pin compatible with any other 8-bit or 16-bit SPI GPIO expanders, but they do have the same enhanced features as the I²C/SMBus GPIO expanders listed above.

Applications

- Mobile phones
- Tablets
- System boards
- Embedded controllers
- Industrial control

Multiprotocol Transceiver

MaxLinear offers the industry's largest portfolio of multiprotocol transceivers. Our dual protocol transceivers operate up to 20Mbps and allow RS-232 or RS-485 communication in a single IC. Our multiprotocol transceivers operate up to 52Mbps and support up to 12 serial protocols: RS-232, RS-485, RS-422, RS-449, EIA-530, EIA-530A, V.10, V.11, V.28, V.35, V.36 and X.21. Advanced features, like built-in cable termination, adjustable logic level, diagnostic loopback modes and 15kV ESD protection, provide maximum versatility and robust serial communication and greatly simplify the use of multiple serial protocol standards over a single connector. These products enable our customers to reduce their component and connector count, lower their Bill of Materials (BOM) costs and customize their end products on the fly or in the field.

Applications

- Factory automation
- Point-of-Sale(POS) equipment
- Industrial and single board computers
- Industrial and process control equipment
- HVAC controls
- Telecommunication equipment
- Gaming machines
- Network switches and data routers

RS-485/RS-422 Transceiver

MaxLinear has a diverse portfolio of RS-485/RS-422 serial transceivers with wide supply voltage operation between 2.8V to 5.5V. Products range from industry-standard transceivers to ultra-high speed, 52Mbps and high differential output transceivers. In addition, MaxLinear has RS-485/RS-422 transceivers that are compliant with popular field buses including PROFIBUS. Advanced features, like hot swap, enhanced fail safe and 15kV ESD protection, ensure reliable and robust data communication over long cable lengths. Several transceivers feature a low voltage logic interface pin that allows system designers to interface directly with 1.8V devices without the need for external components, saving design time and board space.

The XR33x5x family of high performance RS-485/RS-422 transceivers are designed for improved performance in noisy industrial environments and increase tolerance to system faults. The analog bus pins can withstand direct shorts up to $\pm 60V$ and are protected against ESD events up to $\pm 15kV$ HBM. Multipoint applications over long cable runs will benefit from the extended $\pm 25V$ common mode voltage range of these transceivers.

Applications

- Motion control
- Point-of-Sale (POS) equipment
- Industrial and single board computers
- Industrial and process control equipment
- Long or unterminated transmission lines
- Remote utility reading
- Energy monitoring and control
- HVAC networks

XR3088X			Half	20					▪						NSOIC-8

RS-232 Transceivers

MaxLinear offers a large portfolio of RS-232 serial transceivers. The family consists of traditional RS-232 transceivers to the more advanced RS-232 transceivers with Auto On-line Plus and low voltage logic (1.65V to 5.5V I/O logic supply) features. In addition, many of the RS-232 transceivers have enhanced ESD protection. MaxLinear offers new RS-232 products that meet rigid IEC 61000-4-2 air-gap and contact ESD standards. This protection makes the product immune to damage from ESD strikes. Many of the devices are drop-in replacements and functional equivalents to existing industry- standard solutions.

Applications

- Building and security automation
- Point-of-Sale equipment(POS)
- Industrial and single board computers
- Industrial and process control equipment
