Adjustable Constant Current Regulator & LED Driver

45 V, 90 – 160 mA ± 15%, 2.7 W Package

The adjustable constant current regulator (CCR) is a simple, economical and robust device designed to provide a cost effective solution for regulating current in LEDs. The CCR is based on patent-pending Self-Biased Transistor (SBT) technology and regulates current over a wide voltage range. It is designed with a negative temperature coefficient to protect LEDs from thermal runaway at extreme voltages and currents.

The CCR turns on immediately and is at 20% of regulation with only 0.5 V V_{ak} . The R_{adj} pin allows $I_{reg(SS)}$ to be adjusted to higher currents by attaching a resistor between R_{adj} (Pin 3) and the Cathode (Pin 4). The R_{adj} pin can also be left open (No Connect) if no adjustment is required. It requires no external components allowing it to be designed as a high or low-side regulator. The high anode-cathode voltage rating withstands surges common in Automotive, Industrial and Commercial Signage applications. This device is available in a thermally robust package, which is lead-free RoHS compliant and uses halogen-free molding compound. For the AEC-Q101 part please see the NSI45090JD datasheet.

APPLICATIONS

Figure 8. Typical Application Circuit (30 mA each LED String)

Number of LED's that can be connected is determined by:
D1 is a reverse battery protection diode
 $\text{LED's} = (V_{in} - Q_X V_F - D1 V_F) / \text{LED } V_F$
Example: $V_{in} = 12 \text{ Vdc}$, $Q_X V_F = 3.5 \text{ Vdc}$, $D1 V_F = 0.7 \text{ V}$
 $\text{LED } V_F = 2.2 \text{ Vdc @ } 30 \text{ mA}$
 $(12 \text{ Vdc} - 4.2 \text{ Vdc}) / 2.2 \text{ Vdc} = 3 \text{ LEDs in series.}$

Figure 9. Typical Application Circuit (90 mA each LED String)

Number of LED's that can be connected is determined by:
D1 is a reverse battery protection diode
Example: $V_{in} = 12 \text{ Vdc}$, $Q_X V_F = 3.5 \text{ Vdc}$, $D1 V_F = 0.7 \text{ V}$
 $\text{LED } V_F = 2.6 \text{ Vdc @ } 90 \text{ mA}$
 $(12 \text{ Vdc} - (3.5 + 0.7 \text{ Vdc}) / 2.6 \text{ Vdc} = 3 \text{ LEDs in series.}$
Number of Drivers = LED current / 30 mA
 $90 \text{ mA} / 30 \text{ mA} = 3 \text{ Drivers (Q1, Q2, Q3)}$

Comparison of LED Circuit using CCR vs. Resistor Biasing

ON Semiconductor CCR Design	Resistor Biased Design
Constant brightness over full Supply Voltage (more efficient), see Figure 10	Large variations in brightness over full Automotive Supply Voltage
Little variation of power in LEDs, see Figure 11	Large variations of current (power) in LEDs
Constant current extends LED strings lifetime, see Figure 10	High Supply Voltage/ Higher Current in LED strings limits lifetime
Current decreases as voltage increases, see Figure 10	Current increases as voltage increases
Current supplied to LED string decreases as temperature increases (self-limiting), see Figure 2	LED current decreases as temperature increases
Single resistor is used for current select	Requires costly inventory (need for several resistor values to match LED intensity)
Fewer components, less board space required	More components, more board space required
Surface mount component	Through-hole components

Current Regulation: Pulse Mode ($I_{reg(P)}$) vs DC Steady-State ($I_{reg(SS)}$)

There are two methods to measure current regulation: Pulse mode ($I_{reg(P)}$) testing is applicable for factory and incoming inspection of a CCR where test times are a minimum. ($t \leq 300 \mu s$). DC Steady-State ($I_{reg(SS)}$) testing is applicable for application verification where the CCR will be operational for seconds, minutes, or even hours. ON Semiconductor has correlated the difference in $I_{reg(P)}$ to

$I_{reg(SS)}$ for stated board material, size, copper area and copper thickness. $I_{reg(P)}$ will always be greater than $I_{reg(SS)}$ due to the die temperature rising during $I_{reg(SS)}$. This heating effect can be minimized during circuit design with the correct selection of board material, metal trace size and weight, for the operating current, voltage, board operating temperature (T_A) and package. (Refer to Thermal Characteristics table).
