

## ADM1075 Mini Evaluation Kit User Guide

### FEATURES

- Mini evaluation kit for the [ADM1075](#)
- Supports LFCSP device package
- Input voltage range of  $-30\text{ V}$  to  $-75\text{ V}$
- PMBus™ communication supported
- Isolated PMBus interface for  $-48\text{ V}$  operation
- Special N-MOSFET footprint to accommodate different FET packages
- Supports up to 2 sense resistors in parallel
- Supports up to 2 field effect transistors (FETs) in parallel
- Toggle and push-button switches for easy input control
- LED indicated status outputs
- Smaller board compared with [EVAL-ADM1075EBZ](#)

### EVALUATION KIT CONTENTS

- [EVAL-ADM1075MEBZ](#) mini evaluation board
- [EVAL-ADM1075-ISOZ](#) isolation board
- 8-way, 150 mm Micro-MaTch ribbon cable

### ADDITIONAL EQUIPMENT NEEDED

- USB-to-serial I/O interface [USB-SDP-CABLEZ](#)

### REQUIRED SOFTWARE

- Analog Devices hot swap and power monitoring evaluation software (download from [www.analog.com/hotswaptools](http://www.analog.com/hotswaptools))

### GENERAL DESCRIPTION

The [ADM1075](#) mini evaluation board ([EVAL-ADM1075MEBZ](#)) is a compact, reduced feature version of the [ADM1075](#) evaluation board ([EVAL-ADM1075EBZ](#)) for the [ADM1075-1ACPZ](#) and [ADM1075-2ACPZ](#) devices.

The mini evaluation board is designed to power up with a 15 A current limit, a 300  $\mu\text{F}$  load capacitance, and a minimum of 24  $\Omega$  load resistance.

Two sense resistor footprints and two FET footprints provide users with flexibility and allow them to simulate a wide range of application setups.

Multiple test points allow easy access to all critical points and pins. There is one LED to provide users with a direct visual indication of IC power good output.

The [EVAL-ADM1075MEBZ](#) board is fully compatible with the [EVAL-ADM1075EBZ](#) evaluation software tool, which can be downloaded from [www.analog.com/hotswaptools](http://www.analog.com/hotswaptools).

Users need a [USB-SDP-CABLEZ](#) USB-to-I<sup>2</sup>C dongle to use the evaluation software tools. The Micro-MaTch ribbon cable is required if connecting the mini evaluation board to the isolation board ([EVAL-ADM1075-ISOZ](#)).

Complete specifications for the [ADM1075](#) can be found in the [ADM1075](#) data sheet, available at <http://www.analog.com/>, and should be consulted in conjunction with this user guide when using the evaluation board.

## QUICK START GUIDE

1. Download the hot swap and power monitor software from [www.analog.com/hotswaptools](http://www.analog.com/hotswaptools) (see the [UG-353](#) user guide for more information).
2. Connect the mini evaluation board ([EVAL-ADM1075MEBZ](#)) to the isolation board ([EVAL-ADM1075-ISOZ](#)) using the 8-way connector and a Micro-MaTch ribbon cable.
3. Connect the isolation board ([EVAL-ADM1075-ISOZ](#)) to a PC through the 10-way connector and the [USB-SDP-CABLEZ](#) dongle. The blue LED, labeled ISO, on the isolation board illuminates.
4. Connect the power supply to the mini evaluation board ([EVAL-ADM1075MEBZ](#)) using thick wires.
5. To confirm that the boards are configured correctly, set the output of the power supply to 48 V with less than a 1 A current limit and with no load capacitance. If the boards are configured correctly, the green LEDs, labeled D\_PWRGD on the [EVAL-ADM1075MEBZ](#) and PWRGD on the [EVAL-ADM1075-ISOZ](#), illuminate.
6. Press the RESTART push-button on the mini evaluation board ([EVAL-ADM1075MEBZ](#)). The green LEDs, labeled D\_PWRGD and PWRGD, both turn off, and then turn back on after 10 sec.
7. You can use the SHDN2 switch and SHDN push-button on the isolation board ([EVAL-ADM1075-ISOZ](#)) to turn off the hot swap.
8. If a latch event occurs (for example, a short circuit during operation), the red LED, labeled LATCH, illuminates on the isolation board ([EVAL-ADM1075-ISOZ](#)). The latch event can be cleared with a CLEAR FAULT PMBus command or by pressing the DELATCH push-button.
9. Disable the hot swap using the **Hot Swap Control** section of the **Basic Operation** tab of the GUI. Disabling the hot swap should turn off the green LEDs (D\_PWRGD and PWRGD) on both the mini evaluation board and the isolation board.
10. Manually program the sense resistor value and the ADC input resistor divider values (for example,  $R_{SENSE} = 1.5 \text{ m}\Omega$ , ADC top = 200 k $\Omega$ , ADC bottom = 2.8 k $\Omega$ ). There is no EEPROM available on the mini evaluation board ([EVAL-ADM1075MEBZ](#)); therefore, these values must be programmed each time the software GUI is opened.
11. Check that the voltage and current measurements are as expected in the **Power Monitor** tab of the software GUI.

## EVALUATION BOARD DESCRIPTION

The [EVAL-ADM1075MEBZ](#) is designed to demonstrate several features of the [ADM1075](#). It is used in conjunction with the isolation board to provide a fully isolated solution. A simplified drawing of the mini evaluation board and isolation board combination is shown in Figure 2.

The mini evaluation board ([EVAL-ADM1075MEBZ](#)) is connected to the isolation board ([EVAL-ADM1075-ISOZ](#)) using a Micro-MaTch cable and is connected to a PC using a [USB-SDP-CABLEZ](#) dongle for isolated I<sup>2</sup>C communication.

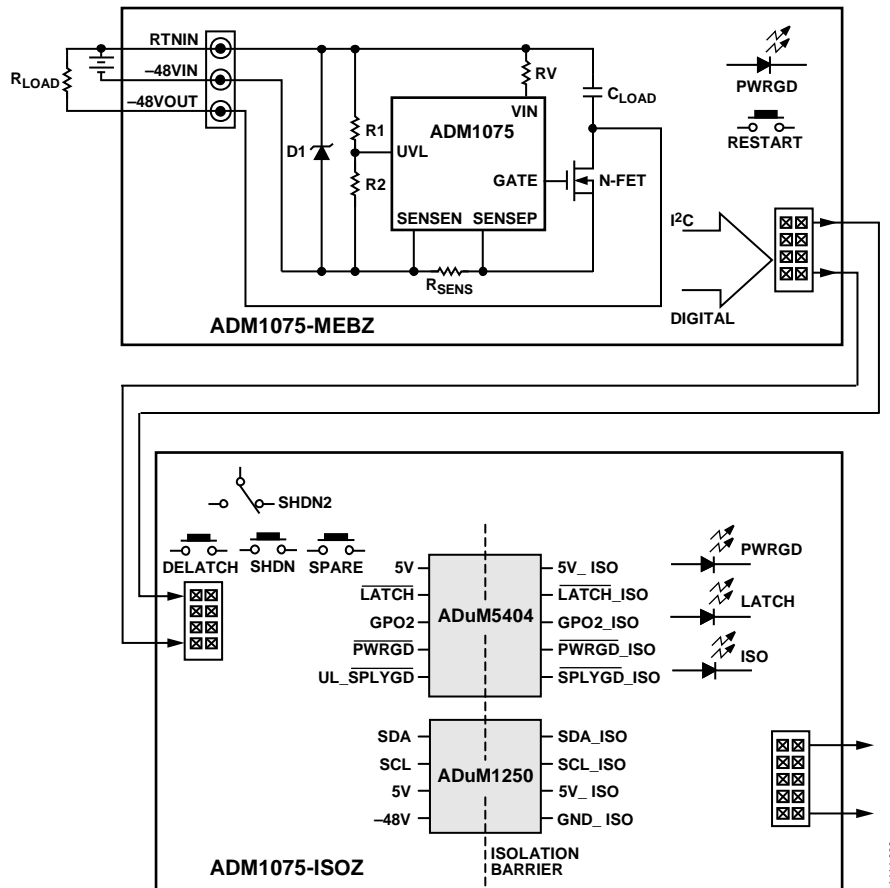

Figure 2. Basic Block Diagram

11414-002

**EVAL-ADM1075MEBZ**

The [ADM1075](#) mini evaluation board ([EVAL-ADM1075MEBZ](#)) is shown in Figure 3.

Thick wires should be used between the power supply and the [EVAL-ADM1075MEBZ](#) board connector to minimize inductance. The D\_PWRGD LED illuminates green after the board is powered and the [ADM1075](#) GATE pin is high (FET fully enhanced). Pressing the RESTART push-button triggers a shutdown that lasts for 10 sec.

The board is intended to be plugged into a system where load capacitance already exists. Two through-hole vias are provided to allow the placement of a load capacitor on the board when

testing the board outside of a real system. All testing performed on the board was done with a 330  $\mu$ F load capacitor.

The [EVAL-ADM1075MEBZ](#) uses a 470 nF timer capacitor to maintain a 10 ms FET safe operating area. The undervoltage and overvoltage thresholds were set using resistor dividers to achieve the values shown in Table 1. A resistor divider was also used on the ISET pin to set the current limit to approximately 15 A. The constant power level was set to the maximum allowable level for the FET safe operating area to allow power-up in one attempt. These values can all be fine-tuned further if necessary. Isolation is required in most  $-48$  V applications because there is a large ground potential difference between the  $-48$  V section of the board and a PC or microcontroller.

Figure 3. EVAL-ADM1075MEBZ Board

**Specifications**

Table 1.

Parameter	Min	Typ	Max	Unit
Undervoltage Rising Threshold, $V_{UVH}$	-34.0	-35.0	-36.0	V
Undervoltage Falling Threshold, $V_{UVL}$	-30.6	-31.5	-32.4	V
Overvoltage Rising Threshold, $V_{OVR}$	-70.3	-72.4	-74.6	V
Overvoltage Falling Threshold, $V_{OVF}$	-68.9	-71.4	-74.0	V
Trip Current	12.1	12.75	13.4	A
Regulation Current	12.9	13.3	13.8	A
Constant Power Level	127	135	142	W

### EVAL-ADM1075-ISOZ

The [ADM1075](#) isolation board ([EVAL-ADM1075-ISOZ](#)) includes the following isolators:

- The ADuM1250 is used to demonstrate the I<sup>2</sup>C isolation and the digital signal.
- The ADuM5404 provides quad-channel digital isolation with *isoPower*®. When the isolated section is powered, the *isoPower* device powers the 5 V components on the primary side of the board.

The push-buttons and switch on the isolation board ([EVAL-ADM1075-ISOZ](#)) allow the user to control the mini evaluation board ([EVAL-ADM1075MEBZ](#)). The three on-board LEDs provide users with a direct visual indication of IC power good, latch event occurrence, and 5 V power supply from [USB-SDP-CABLEZ](#). The 8-way connector is used to connect the mini evaluation board ([EVAL-ADM1075MEBZ](#)) to the isolation board ([EVAL-ADM1075-ISOZ](#)), and the 10-way connector is used with the [USB-SDP-CABLEZ](#) dongle to connect the isolation board ([EVAL-ADM1075-ISOZ](#)) to a PC.

Figure 4. [EVAL-ADM1075-ISOZ](#) Board

## EVALUATION BOARD HARDWARE

### SWITCH, JUMPER, AND LED FUNCTIONS

#### EVAL-ADM1075MEBZ

Table 2. Connector Functions

Connector	Description
RTNIN, –48VIN	Hot swap line voltage inputs that also power the board components. The input voltage ranges from –30 V to –75 V.
–48VOUT	Hot swap line voltage output.
J3	8-way connector; use a Micro-MaTch ribbon cable to connect to an <a href="#">EVAL-ADM1075-ISOZ</a> isolation board.

Table 3. Switch Functions

Switch	Description
RESTART	Push-button switch to trigger a shutdown that lasts for 10 sec.

Table 4. LED Functions

LED	Description
D_PWRGD	PWRGD, active low; green.

Table 5. On-Board ICs

IC	Description
U1	<a href="#">ADM1075</a> main IC.

Table 6. Retry Configuration

Retry Scheme	Bill of Materials Component		
	R-7RTY	R-1-10S	R-7-10S
No Retries (Latch Off)	Not populated	Not populated	Not populated
Seven Retries, Then Latch Off (Default)	0 $\Omega$	Not populated	Not populated
One Retry Every 10 sec	Not populated	0 $\Omega$	Not populated
Seven Retries Every 10 sec	Not populated	Not populated	0 $\Omega$

**EVAL-ADM1075-ISOZ****Table 7. Connector Functions**

Connector	Description
J1	8-way connector; use a Micro-MaTch ribbon cable to connect to an <a href="#">EVAL-ADM1075MEBZ</a> board.
J2	10-way connector; use a <a href="#">USB-SDP-CABLEZ</a> dongle to connect to a PC.

**Table 8. Switch Functions**

Switch	Description
SHDN2	Toggle switch to shut down hot swap. Right = hot swap enabled; left = hot swap disabled.
SHDN	Push-button switch to generate a shutdown. This push-button can be used to clear faults. Note that SHDN has a retry counter capable of counting up to seven shutdown events. After seven shutdown events, GPO2 goes active low, and then a restart or clear via a PMBus is required to enable the hot swap again.
DELATCH	Push-button switch to clear a latch event after seven shutdown events.
SPARE	Push-button switch connected to GPO1_TP.

**Table 9. LED Functions**

LED	Description
PWRGD	PWRGD, active low; green.
LATCH	LATCH, active low; red.
ISO	5 V power supply from <a href="#">USB-SDP-CABLEZ</a> , active high; blue.

**Table 10. On-Board ICs**

IC	Description
U1	ADuM5404, quad-channel isolator with integrated dc-to-dc converter.
U2	ADuM1250 dual I <sup>2</sup> C isolator.

# TEST PLOTS

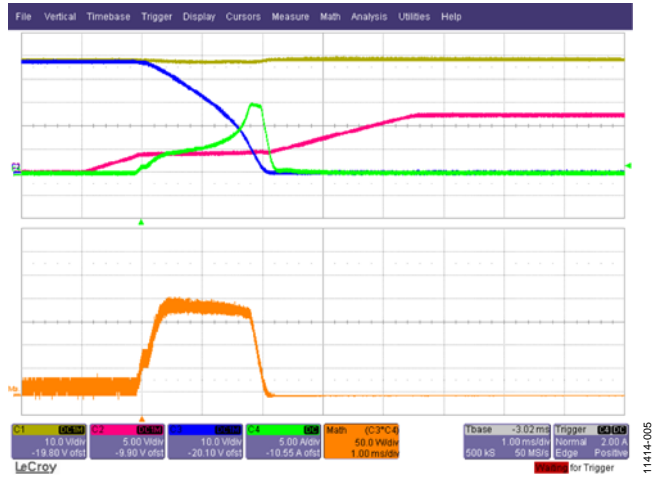

Figure 5. Power Up; Test Points Are as Follows: Channel 1 =  $V_{IN}$  (Yellow), Channel 2 = GATE (Pink), Channel 3 =  $V_{DS}$  (Blue), Channel 4 = System Current (Green), M1 = FET Power (CH2 × CH4) (Orange)

Figure 8. Timer Cycle at Power-Up; Test Points Are as Follows: Channel 1 =  $V_{IN}$ , Channel 2 = TIMER, Channel 3 =  $V_{DS}$ , Channel 4 = System Current

**ESD Caution**

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

**Legal Terms and Conditions**

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
